

Table 4 – Year 12 conversion table

AUSTRALIAN 2007 YEAR 12 RESULTS CONVERSION TABLE

The aim of this table is to provide interstate 2007 Year 12 applicants with information about the conversion of their results across Australia. The conversions are based on 2006 results and must be used as a guide only.

The conversions are based on a common index which allows comparisons to be made across states and territories and across time.

Although given different names, most states and territories used this index in 2006 to report an overall measure of student achievement. The Northern Territory and South Australia made this change in 1997; the Australian Capital Territory, New South Wales, Victoria and Western Australia in 1998.

As the table shows, the measures of overall achievement for the Australian Capital Territory, New South Wales, Victoria, the Northern Territory, South

Australia, Tasmania and Western Australia were exactly the same for 2006 – a Universities Admission Index (UAI) of 81.00 in ACT and NSW = an Equivalent National Tertiary Entrance Rank (ENTER) of 81.00 in Victoria = a Tertiary Entrance Rank (TER) of 81.00 in NT, SA, Tasmania and WA. This means that if you are undertaking your Year 12 studies in 2007 in one of these states and you are planning to apply to institutions in another state, you will not have to convert your result.

The conversions for Australian data were developed by members of the Australasian Conference of Tertiary Admission Centres by agreement of the Taskforce on an Australian Tertiary Admissions System. The taskforce, with members from each state and territory, was appointed by the Ministerial Council on Education, Employment, Training and Youth Affairs.
